The term is 'pulled' in the industry, but yes, glass produced, melted, pulled....all the same thing

This would mean that it is definitely more than 50 tpy produced, right?

I haven't gotten a call back yet but the permit says this:

For the 2009 production of 2,144 tons of glass melted, emissions of 1.8 tons PM, 1.7 tons PM10, 2.7 tons SO2, and 17.9 tons NOx were reported.

I don't know if glass melted is the same as glass produced in this context. Do you know?

What is the name of the area source rule you're referring to?

Paul, I'm having trouble finding someone to ask about Bullseye Glass. Do you know how much glass they produced last year? If it is 50 or more tons, then they should have a Title V permit, because then they would be subject to area source rule for glass manufacturing. Thanks!

Subject: Draft Hot Topic about BullsEye Glass

Here's a draft of the hot topic regarding Bullseye Glass. Let me know if you want me to add anything. It was a lot of information to pare down to "just the facts".
